Travel Product Plan

Problem & User Pain Points

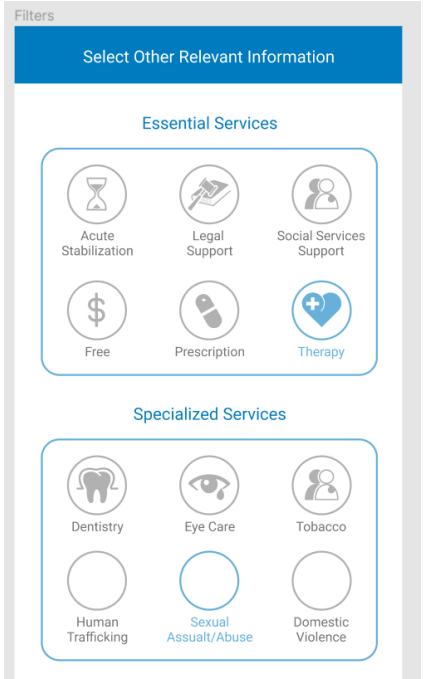
- **Tedious** and **dull** to make a hard copy of a travel plan which does not give you much flexibility to edit anytime.

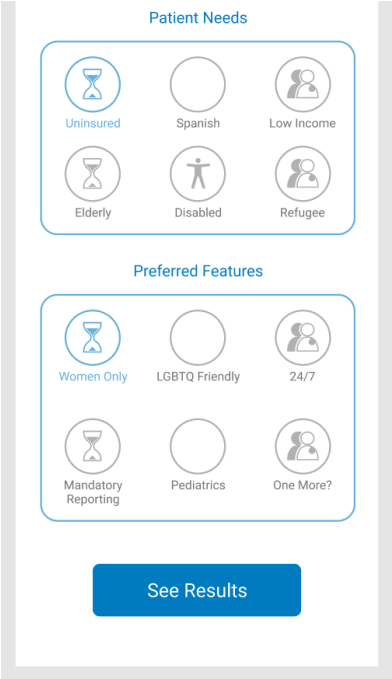
- **Inconvenient** to refer to different apps to get information on your hotel booking, restaurant reservations, activities, events, and your own calendar.

Solution & User Workflow

1. **login and select travel dates, location,& preference**
2. **see a list of recommended activities**
3. **drag and drop activity into their planner**
4. **edit, delete, and add activity from planner**
5. **download the travel plan as a pdf/jpg to share with anybody**

Alpert Medical School White Coat Pocket Guide





Goal:

Creating a mobile application that incorporates the searching mechanism of the website application

Additional Features:

1. An administrator login
2. A database that could count the selecting frequency of filters

Others:

1. Basic accessibility

Group members: Yadi Yue, Yuqi Chai, Zhiyu Wang, Yiming Li
