

Academic Code

CSCI 2951-O: Foundations of Prescriptive Analytics

Please complete and turn in this form as instructed.

The following excerpt is based on “The Academic Code at Brown University”:

Academic achievement is ordinarily evaluated on the basis of work that a student produces independently. Infringement of the Academic Code entails penalties ranging from reprimand to suspension, dismissal or expulsion from the University.

A student’s name on any exercise/project is regarded as assurance that that exercise is the result of the student’s own thoughts and study. Where collaboration is authorized, students should be very clear as to which parts of any assignment must be performed independently.

Cheating on exercises/project can take at least the following forms: using another individual’s solutions in one’s place, to take an exercise/project in one’s place; using unauthorized materials from which one gains unfair assistance; improper collaboration or unauthorized assistance.

Additionally, as a member of the Computer Science department, you are obligated to take steps to prevent others from reading any electronic copies maintained of your work. If you do not know how to do this, please see a TA before submitting this pledge.

I pledge to abide by the rules of the Brown academic code. I also pledge to take the necessary precautions to prevent others from reading any stored copies of my work.
