## Original Discriminative Patch Discovery Method

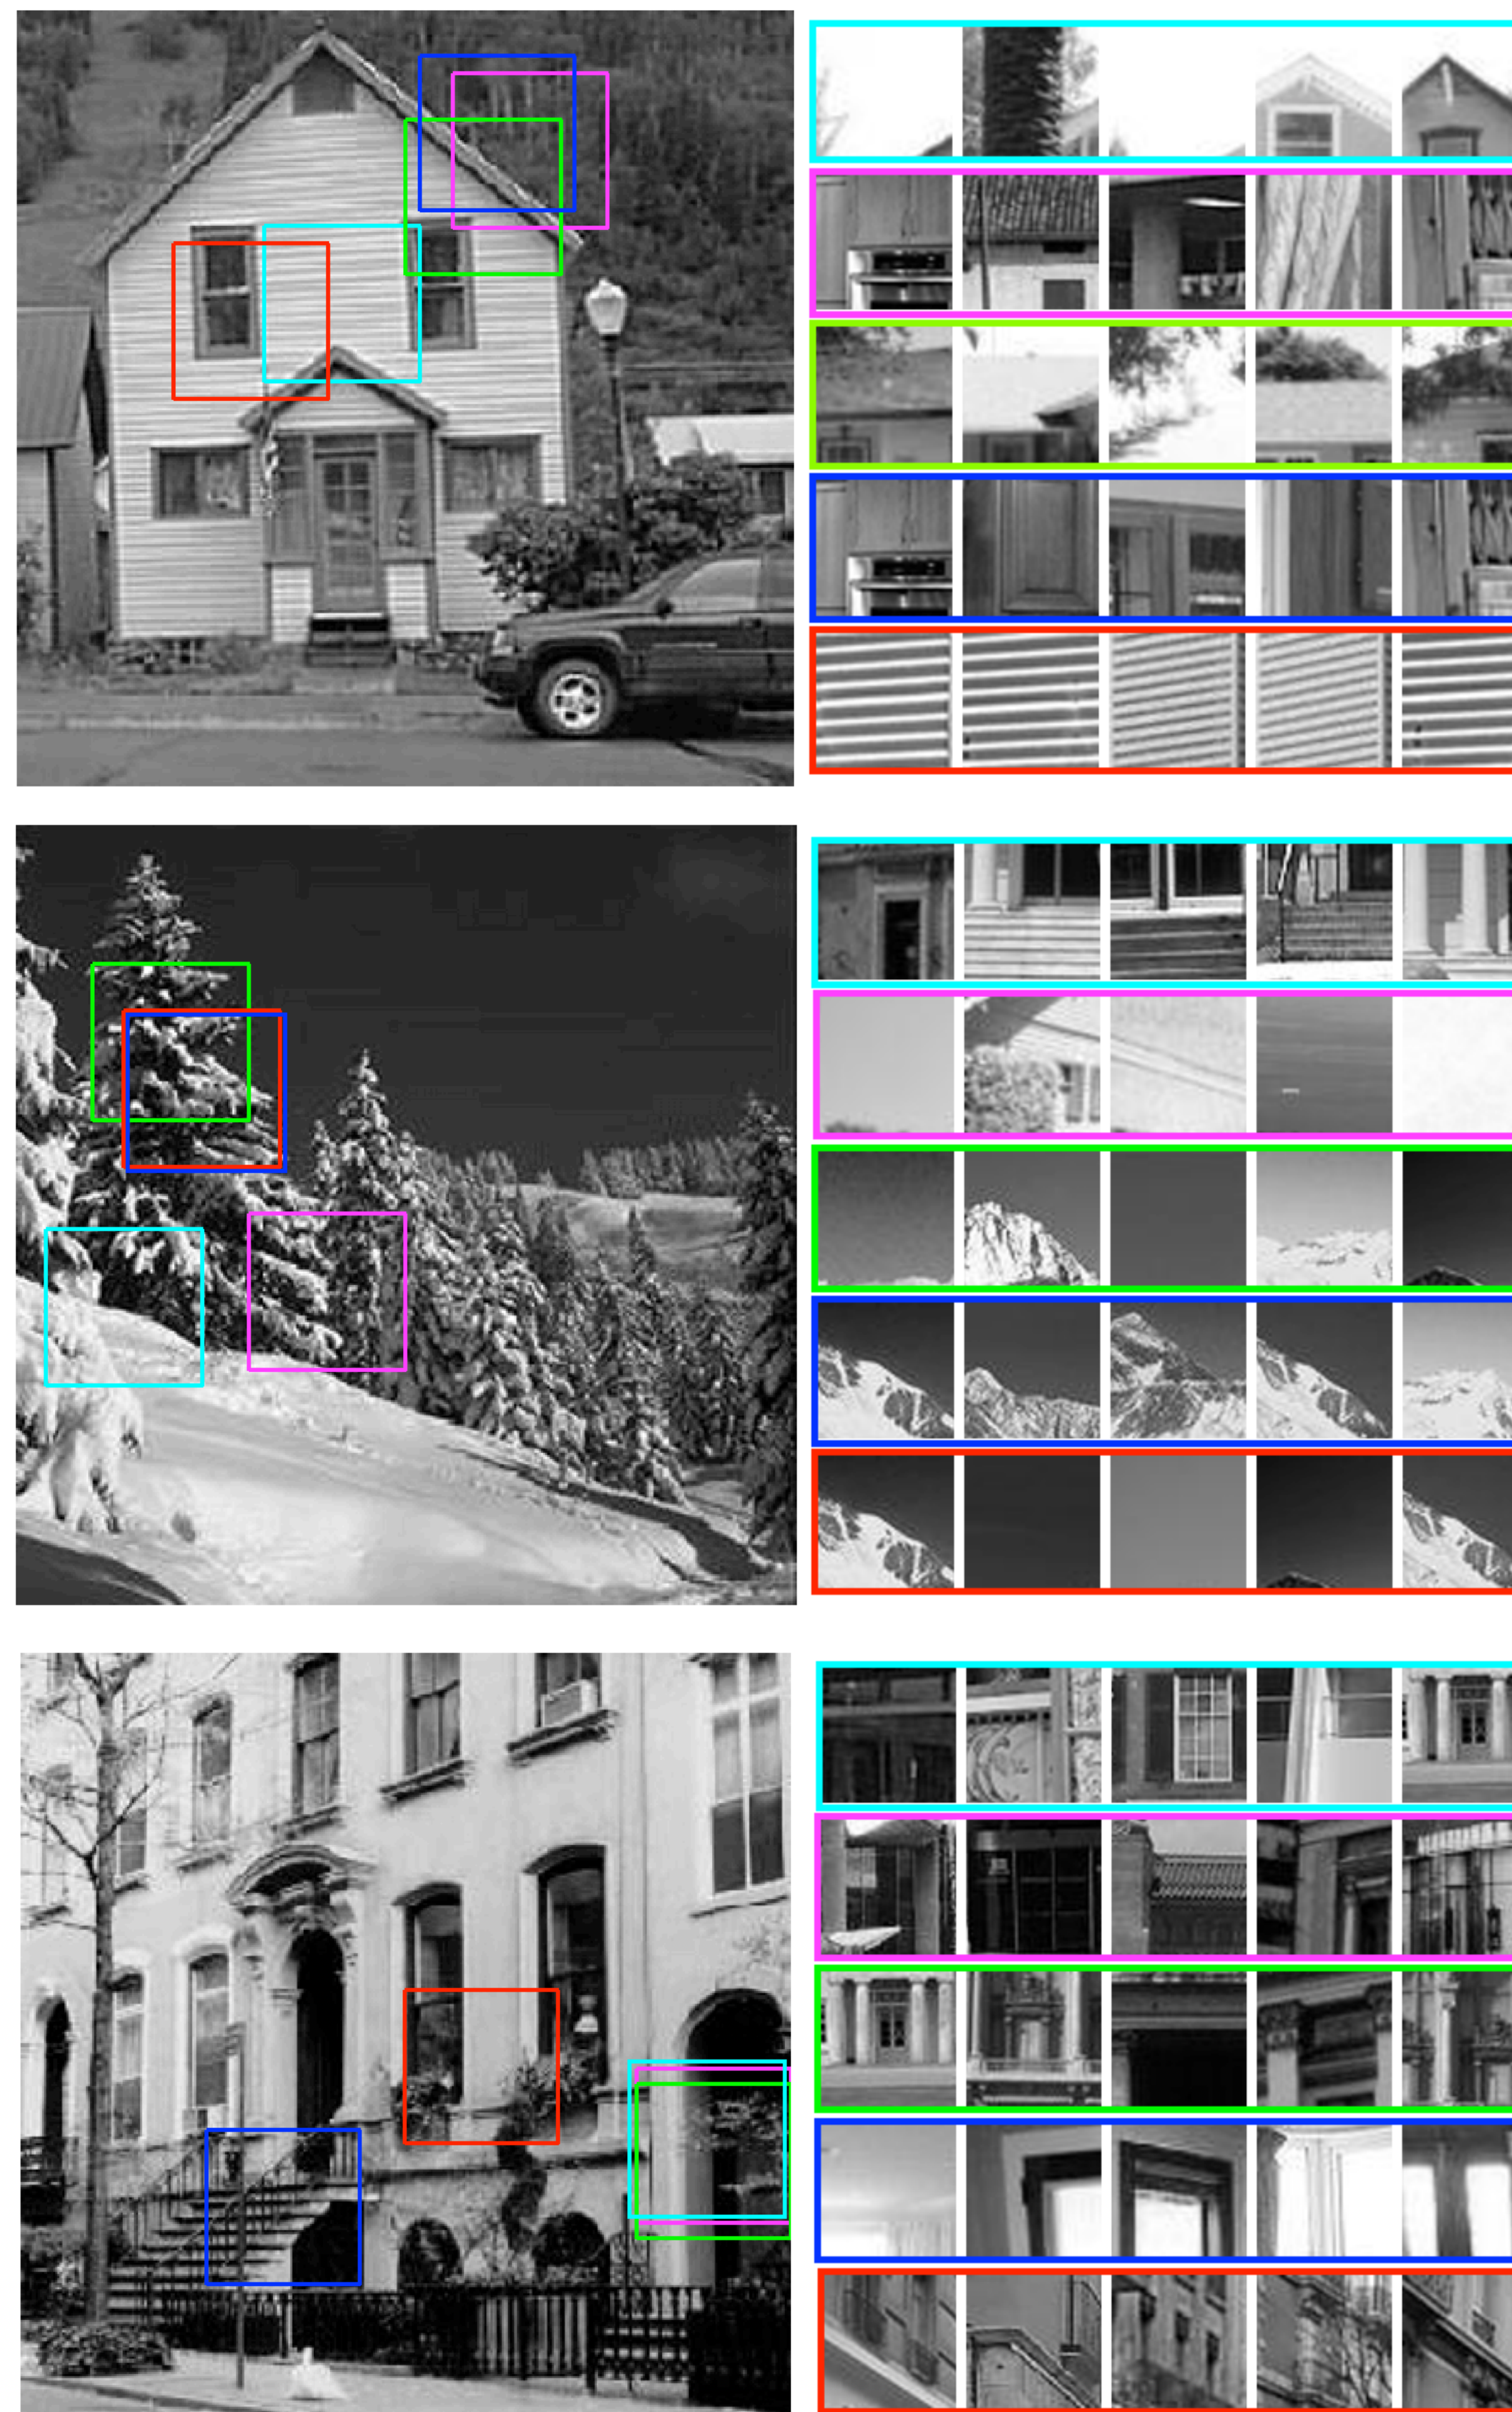

[Singh, Gupta, Efros, *Unsupervised Discovery of Mid-Level Discriminative Patches*, ECCV 2012]

### Algorithm 1 Discover Top $n$ Discriminative Patches

Require: Discovery set  $\mathcal{D}$ , Natural World set  $\mathcal{N}$

- 1:  $\mathcal{D} \Rightarrow \{D_1, D_2\}$ ;  $\mathcal{N} \Rightarrow \{N_1, N_2\}$   $\triangleright$  Divide  $\mathcal{D}, \mathcal{N}$  into equal sized disjoint sets
- 2:  $S \leftarrow \text{rand\_sample}(D_1)$   $\triangleright$  Sample random patches from  $D_1$
- 3:  $K \leftarrow \text{kmeans}(S)$   $\triangleright$  Cluster patches using KMeans
- 4: ~~while not converged() do~~
- 5: ~~for all  $i$  such that  $\text{size}(K[i]) \geq 3$  do~~  $\triangleright$  Prune out small ones
- 6:  ~~$C_{\text{new}}[i] \leftarrow \text{svm\_train}(K[i], N_1)$~~   $\triangleright$  Train classifier for each cluster
- 7:  ~~$K_{\text{new}}[i] \leftarrow \text{detect\_top}(C[i], D_2, m)$~~   $\triangleright$  Find top  $m$  new members in other set
- 8: ~~end for~~
- 9:  ~~$K \leftarrow K_{\text{new}}$ ;  $C \leftarrow C_{\text{new}}$~~
- 10:  ~~$\text{swap}(D_1, D_2)$ ;  $\text{swap}(N_1, N_2)$~~   $\triangleright$  Swap the two sets
- 11: ~~end while~~
- 12:  ~~$A[i] \leftarrow \text{purity}(K[i]) + \lambda \times \text{discriminativeness}(K[i]) \forall i$~~   $\triangleright$  Compute scores
- 13: ~~return  $\text{select\_top}(C, A, n)$~~   $\triangleright$  Sort according to scores and select top  $n$  patches

## Patches discovered with scene category labels as weak supervision

Automatic Patches Human-generated Patches

## Human-in-the-loop Discriminative Patch Discovery: New Algorithm

Require: Discovery set  $\mathcal{D}$ , Natural World set  $\mathcal{N}$

- 1:  $\mathcal{D} \Rightarrow \{D_1, D_2\}$ ;  $\mathcal{N} \Rightarrow \{N_1, N_2\}$   $\triangleright$  Divide  $\mathcal{D}, \mathcal{N}$  into equal sized disjoint sets
- 2:  $S \leftarrow \text{rand\_sample}(D_1)$   $\triangleright$  Sample random patches from  $D_1$
- 3:  $K \leftarrow \text{kmeans}(S)$   $\triangleright$  Cluster patches using KMeans

Ask Humans to refine initial NN clusters using MTurk

- 13: return  $\text{select\_top}(C, A, n)$   $\triangleright$  Sort according to scores and select top  $n$  patches

## Mechanical Turk User Interface:

Users view a group of 25 nearest neighbors.

They select the 5 patches they believe are the most similar.
